

# Simulator Syllabus 2021-2022

As of: 10/21/2021

Simulators is a Winter Lakes Elective Class that allows students to receive credit for the hours they spend on the machines. The course has no start or stop date, but rather an accumulation of 25 hours at 2 quarks per hour (Pass/No Pass). Once students have completed 25 hours then they will receive 50 quarks, which is equal to 1 credit.

We have local companies that are interested in teaming-up with us to provide students with internship opportunities. Quarks will be awarded for those students who participate.

After the Simulator Hub is installed over the Holiday Break, we will be awarding certificates of completion of various simulation modules.

Our hope is that students will be able to apply for heavy equipment jobs when complete with all the modules for a specific piece of equipment.

If you have questions about this course, please call me, Mr. Rasmussen, at 541-824-0115 ext 7212.
